

# Mobile Phone Compatibility

Via adapter cable connect your mobile phone to the following Sennheiser aviation headsets:

- HME 95 (adapter cable is included in the delivery)
- HMEC 250 \* (adapter cable is included in the delivery)
- HMEC 460 \* / HMEC 466 \* (adapter cable is included in the delivery)
- Cable HMEC 46-BV-K \* / -BV-KP \* (adapter cable is available as an accessory; for details, please refer to the user manual of the headset)
- Cable HMEC 26-BV-K \* / -BV-KP \* (adapter cable is available as an accessory; for details, please refer to the user manual of the headset))

\* Active noise compensating headsets by NoiseGard™.

## Suitable mobile phone models

So far the following mobile phone models have been tested and found to operate correctly with the headsets:

Included in delivery 3-pin adapter cable with black connector (ident no. 520317)	Included in delivery from 06/2010 4-pin adapter cable with gray connector (ident no. 538200)
LG • VX8300	HTC • Vodafone VPA Compact / II / S • Magican O2 XDA mini
Motorola • Alle Modelle	Motorola • RAZOR
Sony • K 700i • T 610	Palm • Centro • Blackjack
HTC • Sprint Pocket PC 6700	Nokia • E90

This list is continuously updated as new mobile phones are successfully tested. Sennheiser cannot make a binding declaration with respect to mobile phones which have not yet been tested.

## Connecting a mobile phone (see A)

The 2.5 mm jack socket ① of the headset's operating control allows you to connect your mobile phone. For this to function correctly:

- the headset microphone connector must be connected to the aircraft radio/intercom,
- the aircraft intercom/radio must be powered and switched on,
- on headset models with the NoiseGard™ the NoiseGard™ function must be switched on.

### CAUTION! Danger of accident due to reduced attention!

Making phone calls or operating the mobile phone limits your attention and may cause accidents. During flight operation, do not use the headset for phone calls!

- ▶ Connect the adapter cable to the 2.5 mm jack socket ① on the operating control and to the corresponding jack socket on your mobile phone ②.

You can adjust the volume of your mobile phone via operating control of the headset. However, the functions of the mobile phone cannot be controlled via the headset's operating control.

- ▶ Operate your mobile phone as usual and observe the instructions of the manufacturer.

## General notes (see B)

Not all mobile phones feature a 2.5 mm jack socket. We therefore recommend that you purchase a suitable adapter ③ from a specialist mobile phone accessory retailer. Sennheiser does not accept responsibility/liability for the suitability, function or incorrect function of these adapters. Sennheiser does not accept liability for damage arising from abuse or misuse!
